Applied Acoustics **22** (1987) 321–322

CONTENTS OF VOLUME 22

Number 1

Vibration and Stability of an Orthotropic Plate 1
Ji-Liang Doong and Tsyr-Jang Chen (Republic of China)

SEL for Electrically Hauled Trains 15
H. Estellés, F. Belmar, E. Gaja and P. Solana (Spain)

Selection of Hearing Protectors 25
A. Behar and R. A. Jackson (Canada)

The Reduction of Blast Overpressures from Aqueous Foam in a Rigid Confinement 35
R. Raspet, P. B. Butler and F. Jahani (USA)

Measurement of Coupling Loss Factors by Matrix Fitting: An Investigation of Numerical Procedures 47
C. H. Hodges, P. Nash and J. Woodhouse (UK)

Technical Note

Computer Simulation of Road Traffic Noise in an Urban Built-up Area . . 71
Wu Shuoxian (People's Republic of China)

Calendar 79

Number 2

A Short Method for the Determination of Airborne Sound Insulation Characteristics in Buildings 83
E. Cirillo (Italy)

Sound Absorption by Conical Absorbers and Glasswool Layer Combination . 91
V. Mohanan, O. Sharma and A. F. Chhapgar (India)

A Prediction Method of the Response Probability Distribution for Arbitrary Sound Insulation Systems 103
N. Nakasako, M. Ohta and S. Kuwahara (Japan)

Charts for Acoustic Design of Rooms Exposed to Outdoor and Indoor Noise . 117
G. Rosenhouse (Israel)

A Lower Bound for the Smallest Frequency Determined by Means of the Rayleigh–Ritz Method 131
C. P. Filipich (Argentina)

Über die gewünschte Hörerlautstärke bei Kammermusik 145
Günther Hartmann (FRG)

Book Reviews 155

Calendar 161

Applied Acoustics (**22**) (1987)—© Elsevier Applied Science Publishers Ltd, England, 1987.
Printed in Great Britain

Number 3

The Noise Reduction of Flanking Paths 163
R. J. M. Craik (Great Britain)

Investigations into the Transduction Properties of Dynamic Microphone Membranes Subjected to Transients 177
M. Niewiarowicz (Poland)

An Expert Systems Approach to Transducer Selection and Deployment . . 185
J. P. Ignizio, K. W. Wiemann and W. J. Hughes (USA)

A Method for Estimating the Sound Power Radiated from Plates with Prescribed Excitation in the Multi-mode Region 203
M. Åbom and H. Bodén (Sweden)

On the Formulation of the Intensity Method for Determining Sound Reduction Indices 213
B. G. van Zyl, P. J. Erasmus and F. Anderson (Republic of South Africa)

Technical Note
Experimental and Numerical Values of the Fundamental Frequency of a Lamp-Pole Type System 229
P. A. A. Laura, J. L. Pombo and V. H. Cortínez (Argentina)

Letter to the Editors 235

Calendar 239

Number 4

The Effect of Material Properties on Reducing Intermediate Blast Noise . . 243
R. Raspet, P. B. Butler and F. Jahani (USA)

In-Plane Vibrations of a Circumferential Arch Elastically Restrained against Rotation at One End and with an Intermediate Support 261
C. P. Filipich, R. Carnicer, V. H. Cortínez and P. A. A. Laura (Argentina)

An Exploratory Study of Community Noise Levels in Mexico City . . . 271
R. R. Boullosa and S. J. Perez Ruiz (Mexico)

The Sound Transmission Loss of a Single Panel Measured with the Two-Microphone and the Conventional Method—Comparison with the Statistical Energy Analysis Model 281
M. Minten, A. Cops and F. Wijnants (Belgium)

A Method for the Location of Sparks in Electrostatic Precipitators . . . 297
R. G. Corbin (Great Britain)

Calendar 319
